

A scatter plot showing the relationship between Course Rating (X-axis) and Average Score (Y-axis). The X-axis ranges from 64 to 72, and the Y-axis ranges from 8 to 14. Data points are categorized into three groups, each represented by a different color and a corresponding regression line:

- Blue Group:** Data points are blue circles. The regression line is a solid blue line with a positive slope, indicating that as the course rating increases, the average score also tends to increase for this group.
- Orange Group:** Data points are orange circles. The regression line is a solid orange line with a negative slope, indicating that as the course rating increases, the average score tends to decrease for this group.
- Green Group:** Data points are green circles. The regression line is a solid green line with a negative slope, indicating that as the course rating increases, the average score tends to decrease for this group.

Each data point is labeled with its corresponding average score. The plot includes a light gray grid for easier reading of values.
