```

Stroke Metrics In golf, every hole has a **par**— an average number of strokes taken to get the ball in the hole

There are (almost always), three different **pars** on every course:

- par 3s
- par 4s
- par 5s

A shorthand to determine how a golfer performed across holes is to rate how many strokes *relative to par* they were (-1, -2, +1, +2, etc)

These numbers are given names:

- 0 = par
- -2 = eagle
- -1 = birdie
- +1 = bogey
- +2 = double bogey

I quantify these below:

```
stroke_metrics <- scores_sum |>
  dplyr::select(`doubles+`, bogies, pars, birdies)
head(stroke_metrics |>
  dplyr::arrange(desc(date)))
```

```
## # A tibble: 6 x 7
## # Groups:   date, date_course, course_rating [6]
```

	date	date_course	course_rating	`doubles+`	bogies	pars	birdies
	<date>	<chr>	<dbl>	<int>	<int>	<int>	<int>
## 1	2026-06-28	"2026-06-28\nSilverbell\n10.4"	68	5	7	6	0

Around-the-Green Metrics Chips: + strokes around the green taken to get onto the green

Putts: + strokes taken with the putter on the green

Avg GIR putts: + Average # of putts on holes where the ball was hit on to the green within 2 strokes of par (green in regulation, GIR)

UpDown% (aka Scramble%): + # of holes without a GIR but par was made / # of holes without a GIR

```
atg_metrics <- scores_sum |>
  dplyr::select(chips, `chips+putts`, `UpAndDown%`, putts, `Avg GIR putts`)
head(atg_metrics |>
  dplyr::arrange(desc(date)))
```

Ball Striking Metrics Approach and tee accuracy

GIR (green in regulation): + hole where the ball was hit on to the green within 2 strokes of par

FIR (fairway in regulation): + hole where the ball was hit on to the fairway from the tee box (only on par 4's and par 5's)

Iron FIR: + hole where an iron was used off the tee for a FIR

Driver FIR: + hole where driver was used off the tee for a FIR

```
ball_striking_metrics <- scores_sum |>
