Performance Metrics Breakdown

GIR %, FIR %, Scramble %, Penalties, and scoring relationships

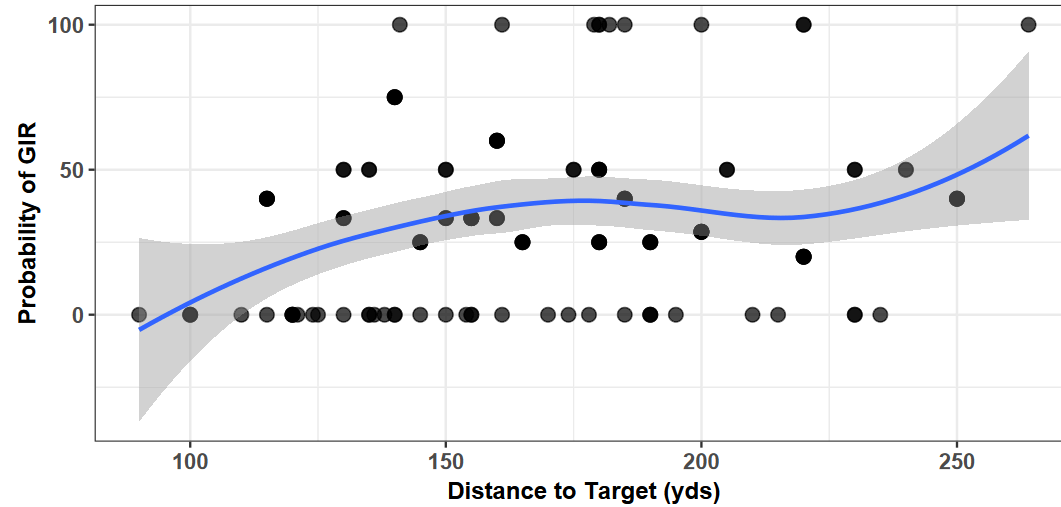

Date	Course	Tees	Gross Score	Net Score	FIR %	GIR %	Total Putts
Sunday, July 13, 2025	Randolph North	white	84	77	71.40	16.70	
Sunday, August 03, 2025	Dell Urich	white	72	65	38.50	55.60	
Sunday, August 31, 2025	Dell Urich	white	85	76	30.80	27.80	
Sunday, September 07, 2025	Dell Urich	white	83	74	61.50	27.80	
Sunday, September 21, 2025	Randolph North	white	90	82	21.40	11.10	
Sunday, October 05, 2025	Randolph North	white	82	74	28.60	27.80	
Sunday, October 26, 2025	Randolph North	white	82	73	35.70	22.20	
Sunday, November 09, 2025	Randolph North	white	81	72	57.10	44.40	
Sunday, November 30, 2025	Silverbell	white	81	71	42.90	38.90	

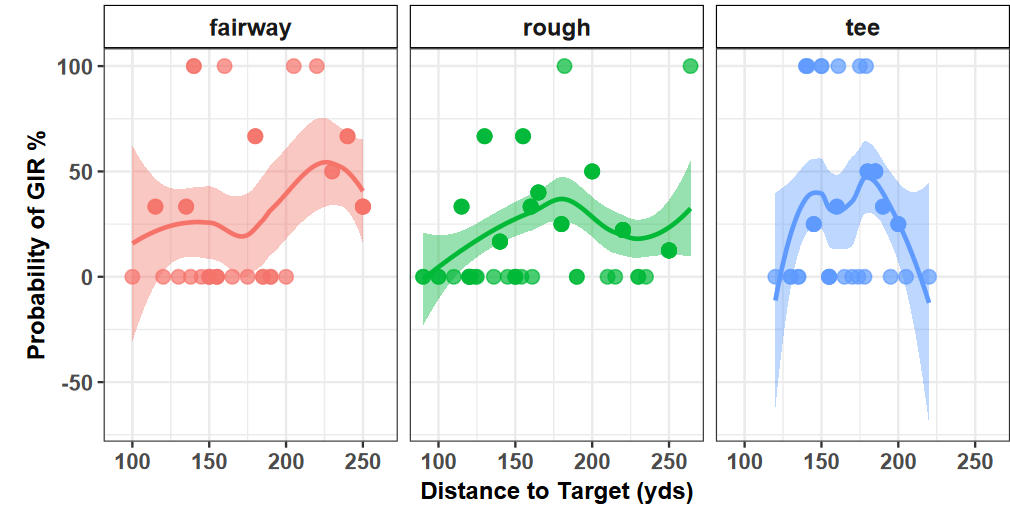

Approach Performance Diagnostics

Distance-based GIR probability, lie-type effects, and Par 3 performance

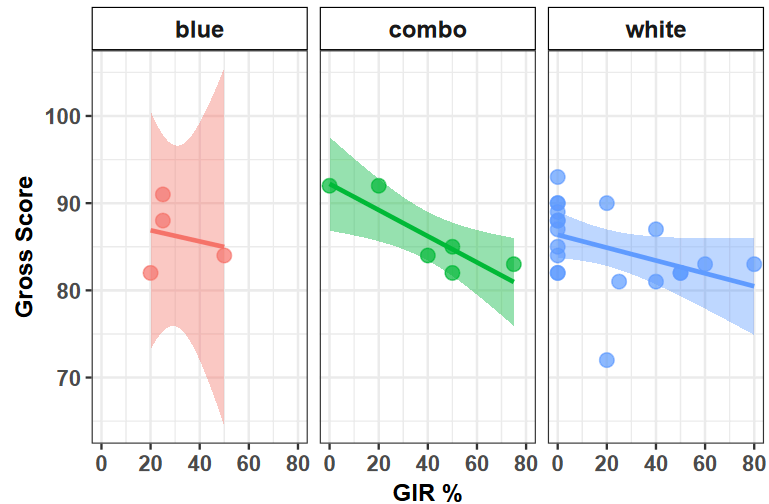

Approach Distance vs GIR Probability

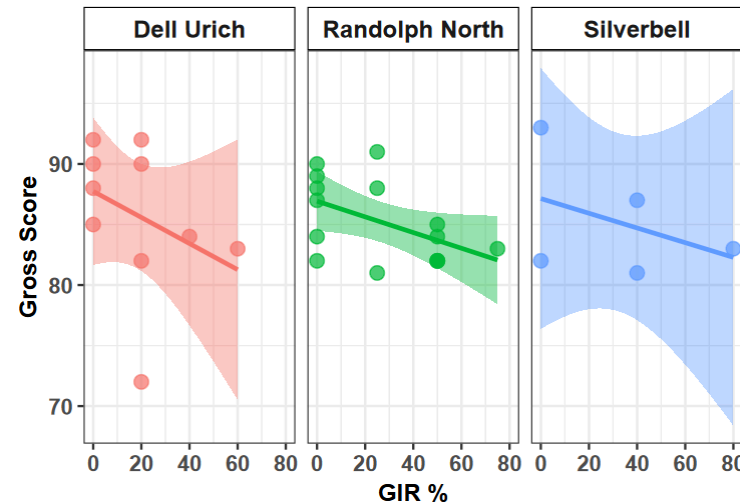

Approach GIR Probability vs Distance (by Lie)

Gross Score vs Par-3 GIR % by Tee Selection

Gross Score vs Par-3 GIR % by Course

Interpretation:

Distance drives GIR probability, with poor lies pulling the probability curve down

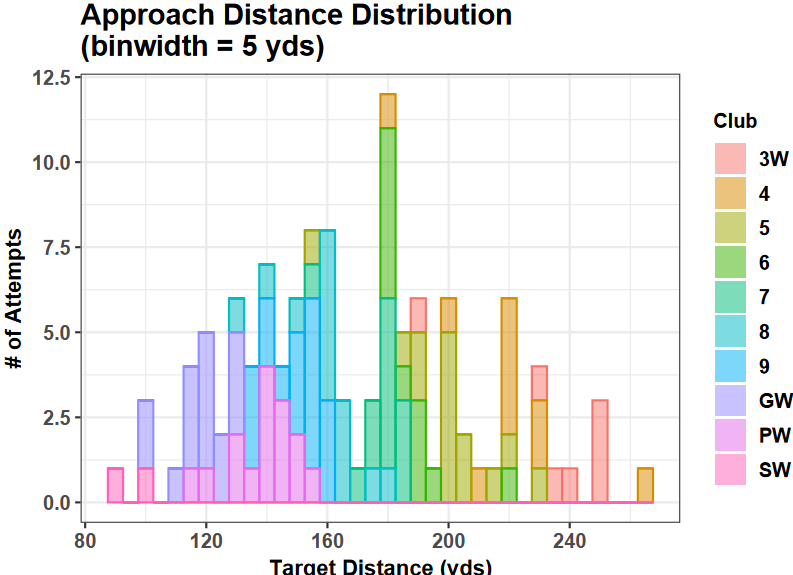

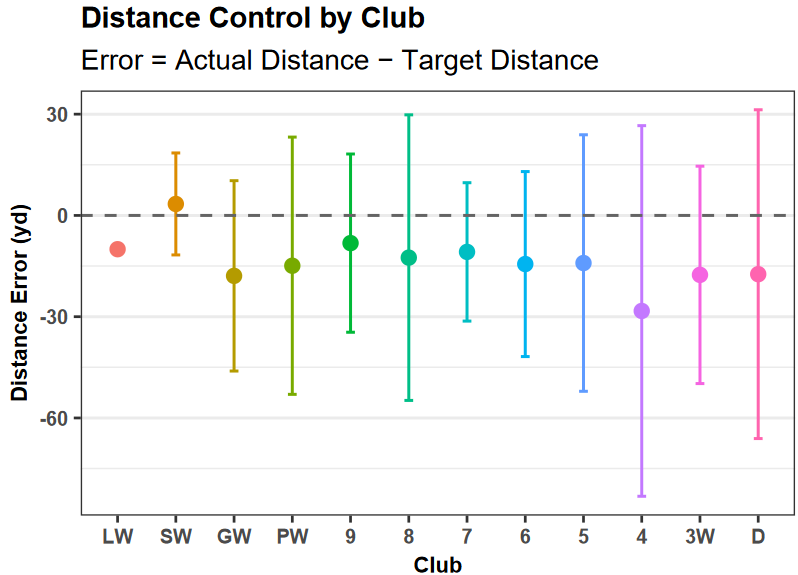

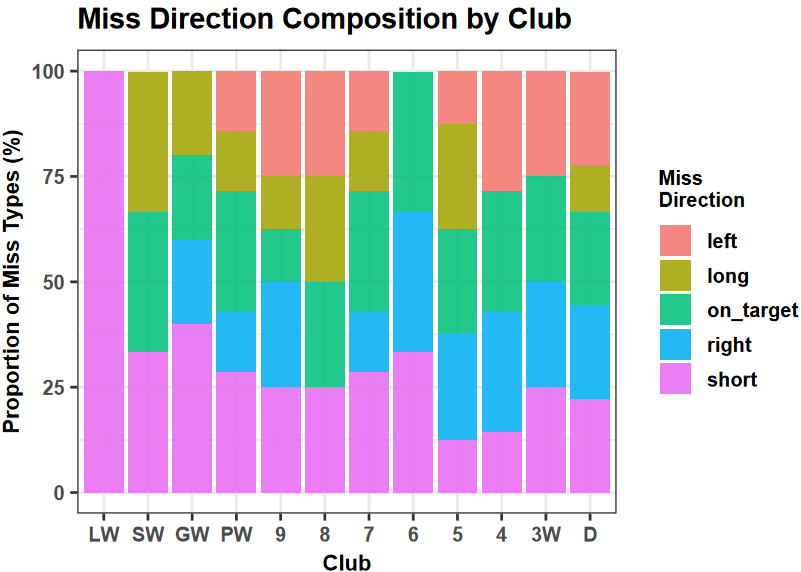

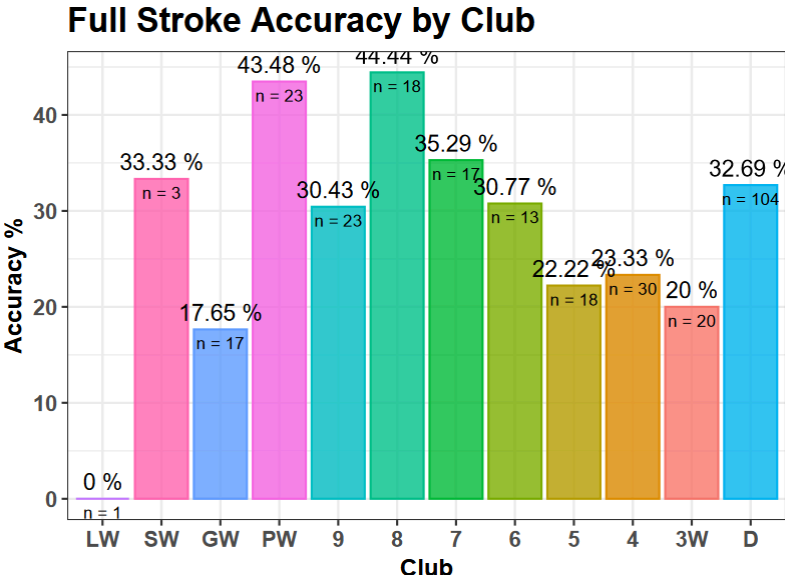

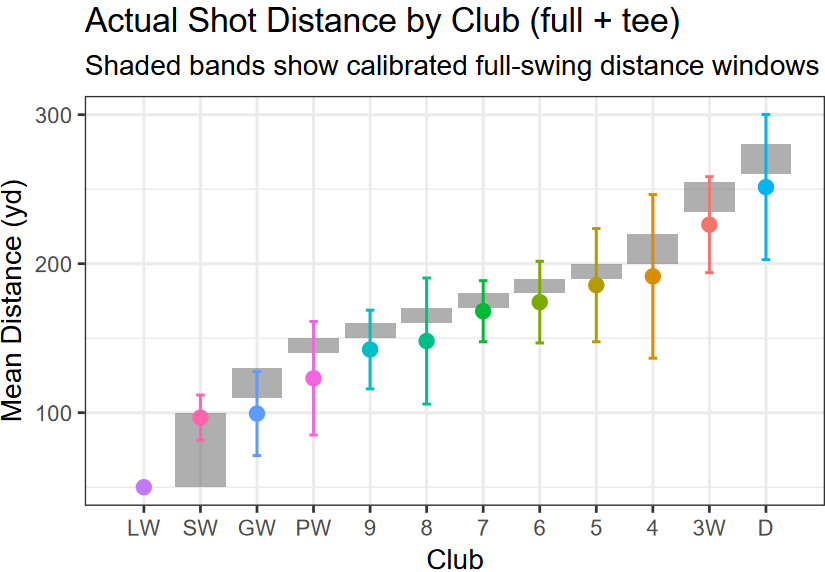

Long irons are strong-- when used from the fairway, they pull the probability curve up

Opportunities to improve from the fairway or off the tee at ~ 155 - 175 yards

Accounting for lie type, Par 3's highlight true iron skill and also reveal stability

Club-Level Performance Diagnostics

Distance windows, accuracy, miss-direction, approach patterns, and distance control

Interpretation:

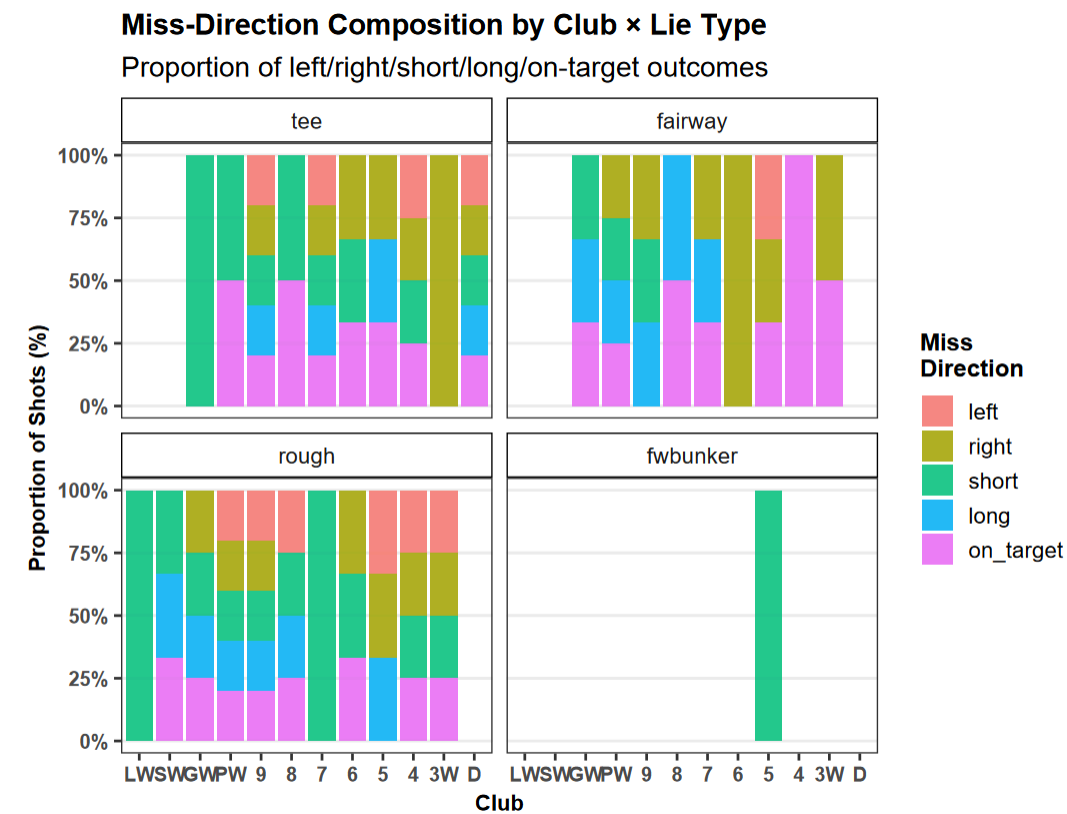

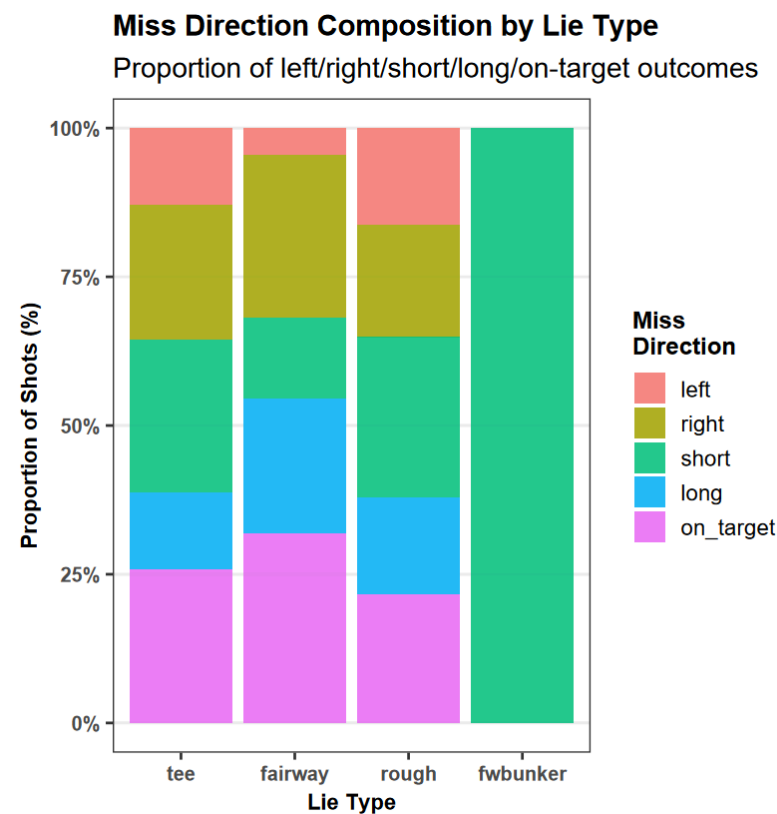

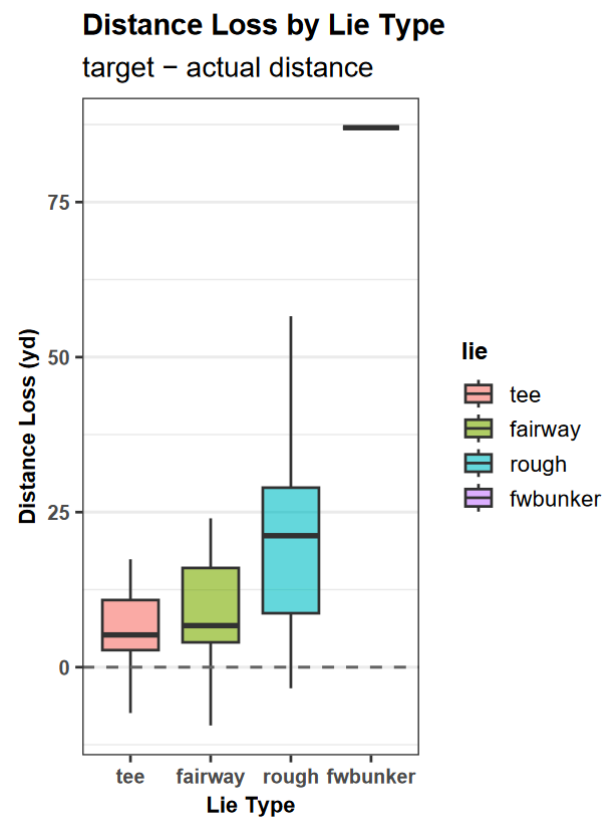

Club-level performance shows how distance windows, accuracy, and miss-direction patterns contribute to approach outcomes

Realistic, uniform, slight underperformance with most clubs: slightly shorter distances than calibrated distances

Mid-to-long irons are strong, with tighter variance, more accuracy, and less distance loss than wedges, which tend to miss long

Lie-Type Performance Diagnostics

Distance loss, directional tendencies, and lie-specific miss patterns

Interpretation:

Lie type strongly affects both distance loss and directional misses: less accuracy from the rough, with more frequent short- and left- misses (clubface/ball/ground contact variability)

Fairway is roughly equivalent to the tee in terms of distance lost, with more variation, more long misses (especially with wedges-- thin, bladed shots) and more right- misses
